

## Backgrounds & Borders

### Page background

The background colour can be set by CSS styles on the <body> tag. This will set the background for the whole page. In this document, the background has been set as a gradient (see below).

### #####

Background can be set as a linear or radial gradient between two colours. The background has been set on this <div> element to a linear gradient. CSS style used here is:

```
background-gradient: linear #c7cdde #f0f2ff 0 1 0 0.5;
```

The four numbers are coordinates in the form (x1, y1, x2, y2) which defines the gradient vector. x and y are values from 0 to 1, where 1 represents the height or width of the box as it is printed.

Background gradients can be set on all block elements e.g. P, DIV, H1-H6, as well as on BODY.

The background has been set on this <div> element to a radial gradient. CSS style used here is:

```
background-gradient: radial #00FFFF #FFFF00 0.5 0.5 0.5 0.5 0.65;
```

The five numbers are coordinates in the form (x1, y1, x2, y2, r) where (x1, y1) is the starting point of the gradient with color1, (x2, y2) is the center of the circle with color2, and r is the radius of the circle. (x1, y1) should be inside the circle, otherwise some areas will not be defined.
